

VidyaPath: AI Study Planner

A smart, beginner-friendly tool designed to help students plan their studies, manage time, and reduce exam stress 4 built with Python by **Ujjwal Jalotra** (Reg. No. 25BAI10118).

Project Overview

What is VidyaPath?

VidyaPath is a simple yet powerful study planning tool that uses basic programming logic to help students organise subjects, allocate time wisely, and build a consistent study routine.

- The goal: make studying more **structured**, more **productive**, and far less stressful.

Key Features

Daily & Weekly Plans

Generate a structured study plan for any day or week based on your schedule.

Subject Organisation

Easily list and prioritise subjects and topics to cover.

Time Management

Divide available study hours efficiently across all subjects.

Technologies Used

Python

Core language powering all logic, input handling, and schedule generation.

File Handling

Saves and retrieves study plans using local text files 4 no database needed.

CLI Interface

A simple Command Line Interface for fast, distraction-free interaction.

How It Works

The workflow is straightforward 4 students provide their subjects, available hours, and priority levels. VidyaPath processes this input and outputs a clean, actionable study schedule in seconds.

Project Folder Structure

Clean & Organised Codebase

The project follows a simple, readable structure 4 ideal for beginners learning how to organise a real-world Python project.

- **main.py** 4 Entry point; runs the application
- **planner.py** 4 Core logic for schedule generation
- **data/schedule.txt** 4 Stores the saved study plan
- **README.md** 4 Project documentation and usage guide

```
AI-Study-Planner-VidyaPath/
```

```
'
```

```
=%%  main.py
```

```
=%%  planner.py
```

```
=%%  data/
```

```
'  5%%  schedule.txt
```

```
5%%  README.md
```

How to Use VidyaPath

1

Run the App

Execute `main.py` in your terminal to launch the planner.

2

Enter Your Details

Input your subjects, available study hours, and topic priorities.

3

Get Your Plan

VidyaPath generates a personalised study schedule instantly.

4

Save & Follow

Learning Outcomes

What This Project Taught

- **Python Fundamentals** 4 Practised variables, loops, functions, and conditionals in a real project context.
- **Project Structure** 4 Understood how to organise files and modules in a clean, maintainable way.
- **Problem Solving** 4 Broke down a real-life challenge (study planning) into logical, programmable steps.
- **Building for Impact** 4 Gained experience creating a tool that solves an actual student problem.

Future Improvements

Graphical Interface (GUI)

Replace the CLI with a visual, click-friendly interface for wider accessibility.

AI Recommendations

Integrate smart algorithms that adapt the schedule based on student performance.

Reminders & Alerts

Add push notifications or alarm-based reminders to keep students on track.

Smarter Scheduling

Improve the core algorithm to better balance workload and handle complex timetables.

Conclusion

VidyaPath proves that even a simple application can create real impact. By combining core Python skills with a genuine student need, this project delivers a practical, beginner-friendly tool that makes study planning smarter and more manageable.

Built With

Python · File Handling · CLI

Designed For

Students seeking structure and focus
